

Next-generation ShareCradle

The future of
adaptable charging

Simplify, adapt and future proof device charging

The revolutionary ShareCradle system offers a single, modular platform to charge all your Zebra devices, from mobile and wearable computers to tablets. Zebra's next generation charging system delivers a new level of modularity and design simplicity that drives flexibility, functionality and sustainability up, while driving maintenance, equipment and energy costs down. Universal bases are at the heart of the ShareCradle system, allowing you to simply snap-on the cradle cups you want to meet charging needs. Bases are available in single-slot for work and customer-facing areas, and five-slot for the back room. Cradle cups are available in a variety of configurations for the entire portfolio of Zebra mobile computing devices and batteries. And just swap the cradle cup to enable compatibility with new Zebra devices, eliminating the need to purchase new charging infrastructure—and enabling a cost-effectively upgrade to Zebra's latest mobile devices.

Effortless, tool-free setup

Get unmatched charging versatility and investment protection with interchangeable cups—a single ShareCradle base can charge different types of mobile devices and their batteries. Whether you are upgrading or adding new types of devices, your charging hardware evolves with you—simply swap the cups, not the entire charging system. Since the cups easily snap on and off, tools, rewiring and special skills are no longer required. What used to take minutes now takes seconds, dramatically reducing the time required to maintain and upgrade charging infrastructure.

Fast charging options

With high speed charging, your devices spend more time in the hands of your workers, and minimal time in chargers. With USB-C and Power Delivery (PD) technology, you can charge fully depleted devices from 0 to 70% in just 45 minutes.¹ Use the 45W USB wall adapter, the standalone single device cradle cup² or the 5-slot fast charge base for flexibility. Now, charged devices and batteries are always available for the next shift—without sacrificing battery lifecycle.

Smaller, lighter, more efficient and more sustainable power supplies

The new high-efficiency circuitry enables the design of much smaller power supplies that cost less to ship, use less power, cost less to operate—and are more sustainable. The 150W 5-slot power supply is 50% smaller and 35% lighter, and the 45W wall adapter is 65%+ smaller and nearly 60% lighter.

Adaptive charging

With advanced charging technology, you get charging performance without compromise—you never need to choose between charging speed, safety and battery lifecycle. Power levels are automatically adjusted, extending battery lifecycle, which reduces battery costs and electronic waste. Device temperature is also monitored and charging speed adjusted to prevent overheating, which can also erode battery lifecycle.

Double your charging capacity

A double density cradle doubles your charging capacity, allowing your current backroom to accommodate twice the number of devices in the same space.

Rack mount compatible

The 5-slot bases mount in standard racks, enabling you to keep the rack-mount architecture you have today.

Durability designed for the workplace

The next-generation ShareCradle system is built for the real world. Sensitive electronics are protected by a ruggedized chassis and an integrated water drainage system, ensuring the reliable performance your enterprise requires.

Go green with a higher sustainability score

The ShareCradle system is good for the environment. These chargers use less power, reducing electricity consumption. Adaptive charging extends battery life, reducing electronic waste. And a double-density option reduces the number of cradles required.

Universal Modular ShareCradle System... mix and match to build exactly what you need

1

Choose a universal base

1-Slot Base
Charge+Ethernet

5-Slot Base
3 bases: Charge Only, Charge+Ethernet or Fast Charge

2

Choose your cradle cups

1 Device
Fast Charge

2 Device
Charge

1 Device/
1 Battery Charge

4 Battery
Charge
